

UNDERWOOD

Renewable Energy

Texas continues to be a leader in renewable energy and is identified as a highly desirable state for developing renewable energy. While Texas leads the nation in wind power development, Texas is still in its infancy for solar development. Obviously, numerous companies see the opportunities for utility-scale solar development.

Underwood seized the opportunity to be involved in the boom in wind energy development. Likewise, Underwood leads the region in working with landowners, school districts, hospital districts, counties, and developers as they explore the solar energy opportunities.
